

## ABSTRACT OF THE DISCLOSURE

The present invention encompasses compounds of Formula I

5

I

or pharmaceutically acceptable salts thereof, wherein A is the base molecule of a propionic acid or acetic acid NSAID, or a derivative thereof, X is  $-CO_2H$ ,  $1H$ -tetrazol-5-yl or  $2H$ -tetrazol-5-yl and R<sup>1</sup> and R<sup>2</sup> are each independently selected from the group consisting of: C<sub>1-6</sub>alkyl and C<sub>3-6</sub>cycloalkyl, as well as pharmaceutical compositions comprising the compounds and methods of using the compounds. The compounds of the present invention lower the level of A $\beta$ 42 and are therefore useful for preventing, delaying or reversing the progression of Alzheimer's Disease.
